

FLAG{welcome-to-the-ctf}

Location: LauncherActivity.java

When I opened the app immediately I was welcomed by the Flag.

And inside the `openMainActivity()` method, the flag was sitting in plain sight as a hardcoded string inside a `Toast.makeText()` call. No obfuscation, no encoding - it just pops up on screen when the user taps the button to enter the app.

```
Toast.makeText(launcherActivity, "FLAG{welcome-to-the-ctf}", 1).show();
```

```
return fastBitmap.refreshAmbientProfile(assets, jCurrentTimeMillis, TimeZone.getDefault().getOffset(jCurrentTimeMillis));

private final void openAnalysisView() throws IOException {
    setContentView(R.layout.activity_launcher_sync);
    this.statusText = (TextView) findViewById(R.id.syncStatus);
    Object getSystemService = getSystemService("location");
    Intrinsic.checkNotNull(systemService, "null cannot be cast to non-null type android.location.LocationManager");
    this.locationManager = (LocationManager) systemService;
    InputStream inputStreamOpen = getAssets().open("opening_book/massive_flag.dat");
    try {
        ((ImageView) findViewById(R.id.analysisImage)).setImageBitmap(BitmapFactory.decodeStream(inputStreamOpen));
        Unit unit = Unit.INSTANCE;
        CloseableKt.closeFinally(inputStreamOpen, null);
        ((Button) findViewById(R.id.primaryAction)).setOnClickListener(new View.OnClickListener() { // from class: de.tadris.flang.LauncherActivity$$ExternalSyntheticLambda0
            @Override // android.view.View.OnClickListener

            locationManager3 = null;
        }
    }
}
```

Technique

Simple static analysis. Text search for "FLAG" in JADX immediately surfaced it, was hardcoded. It also showed in the app
